How to Read the Height Chart

1. Start by choosing a Shed Shop model and size from our price list; for example an 8x12 "Tall Classic".
2. Note the first number listed for the size; for example the first number of an 8x12 is "8". This number represents the "roof span" of the building.
3. Locate the appropriate row on the chart above; for example the height dimension grids for an 8x12 "Tall Classic" are highlighted above.

Length & Width Size Notes

Exterior Length & Width: Sheds are 3 inches larger than the stated size at the exterior; for example an 8x12 is actually 8' 3" x 12' 3".

Interior dimensions of "Shed" models: the 2x4 framing studs reduce the inside dimensions at each stud by 3.5".

Interior dimensions of "Studio" models... are reduced by 8 inches; for example the interior of a finished 8x12 Studio is 7' 4" x 11' 4".

Exterior Roof Overhang: the roof overhang extends beyond the building anywhere from 2 to 12 inches depending on model; ask for details.
